# LESSON PLAN — 3.5 NEWS ANALYSIS

## Std. VII | Maharashtra State Board English Balbharati

| | | | |
|---|---|---|---|
| **Topic** | RC – Non-fiction text | **Learning Objective** | SWBAT identify problem and solution in the given informational text. |
| **Text** | 3.5 News Analysis | **Reading approach** | Coherent whole-text / sustained reading |
| **Core reading focus** | Distinguishing reported information from interpretation/inference | **Pedagogical mode** | Guided inquiry + close reading + student-led discussion |

| Sequence of Facilitation | What is discussed / done | Pedagogical Interface | Expected Learning / Movement |
|---|---|---|---|
| 1. Establish the chapter as coherent reading | Introduce the chapter title: "News Analysis". Ask students what the title suggests about how they should read the chapter. Establish that the four articles will be read together before detailed analysis. | Whole-text orientation; activation of prior knowledge | Students form an initial reading purpose from the chapter title. |
| 2. Conceptual frame: NEWS | Discuss the dictionary meaning of "news". Identify "information" as part of the meaning of news. | Guided questioning; concept elicitation | Students connect news with information. |
| 3. Separate concept within the same frame: ARTICLE | Introduce the dictionary meaning of "article" independently. Establish that an article is a separate concept: a piece of writing about a particular subject. | Explicit concept building | Students distinguish the concept of an article from the meaning of news. |
| 4. Bring the concepts together | Connect NEWS + INFORMATION + ARTICLE. Ask: What kind of information are we receiving when we read a news article? | Conceptual integration; guided inquiry | Students begin to approach the text analytically rather than only for content. |
| 5. Sustained reading of the four articles | Students read the four news articles sequentially: (a) Ritika Takes a Break from Acting; (b) Closed Shoes Not Allowed in Examination Halls; (c) Most Dangerous Time in History; (d) Quick Cure for All Ailments? | Whole-text / sustained reading; student-led oral reading | Students encounter the complete set of texts before detailed analysis, preserving continuity of reading. |
| 6. Return to the text as a whole | After the four articles are read, return to the question: What does "News Analysis" mean now that we have read the chapter? Invite students to recall and compare information across the four texts. | Whole-text discussion; comparative reading | Students begin identifying common analytical features across the articles. |
| 7. Examine what is reported | Ask: What is actually reported? Who is the source? What does the article itself establish? Use evidence from the four articles. | Guided close reading; source identification; textual evidence | Students distinguish directly reported information from attributed claims. |
| 8. Examine interpretation and inference | Ask: What are we concluding from the information? Is that conclusion stated in the article, or are we inferring it? Clarify that a reasonable inference is not necessarily a fact stated by the text. | Evidence-based reasoning; classification and justification | Students distinguish reported information from interpretation/inference. |
| 9. Identify the problem | Guide students to formulate the reading problem: a non-fiction/news text may contain reported information alongside claims, viewpoints, interpretations or information from which the reader makes inferences. | Problem identification through guided inquiry | Students identify the analytical problem in an informational text. |
| 10. Identify the process | Students articulate a reading process: identify the information → identify its source → examine what is actually stated → distinguish report from interpretation/inference → support conclusions with textual evidence. | Metacognitive reading; guided discovery | Students develop a transferable way of analysing non-fiction. |
| 11. Arrive at the solution | Return to the SWBAT. Students formulate the reader's response: analyse the information presented, distinguish what the text establishes from what is claimed or inferred, and reach conclusions supported by the text. | Learner-generated conclusion; synthesis | Students identify the solution/response to the problem and connect it to critical reading of non-fiction. |
| 12. Assignment – CBT | Students independently apply the same reading process to two new India-centric news reports presented in the CBT. The texts are deliberately written at an appropriate Grade 7 language level. Students identify the problem and solution, identify sources, distinguish reported information from claims, draw an inference, and support their conclusion using the information in the texts. | Guided independent application → CBT-based assessment | Students transfer the reading process from the textbook to unfamiliar informational texts and demonstrate independent application of the SWBAT. |

**Overall pedagogical design:** The lesson uses coherent whole-text reading followed by guided inquiry and close reading. The teacher facilitates the movement from the chapter title and conceptual vocabulary to sustained reading, comparative analysis, identification of the problem, a learner-generated solution, and independent application through the CBT Assignment.
